Series 481

Pressure reducing valves made of stainless steel with threaded connections

481

MATERIAL

SPECIFICATION

1/2" - 2"

Inlet pressure: -20°C to +120°C

up to 40 bar **Outlet pressure**: 0.5 to 15 bar depending on version

SUITABLE FOR

Liquids	neutral and non-neutral	Ĩ
Air, gases and vapours	neutral and non-neutral	\ge
Potable water cold	up to 40°C	
Potable water hot	up to 95°C	

■ EXAMPLES OF USE

For the protection of:

- domestic water supply systems

- commercial and industrial plants
- against too high supply pressure.

Pressure reducers are used, if within a piping system despite of varying pressures on the inlet side a certain pressure must not be exceeded on the outlet side.

- potable water supply according to DIN 1988
- process water supply in industrial- and building technology
- snow-making equipment
- fire-fighting equipment and sprinkler systems
- shipbuilding industry and offshore plants
- secondary areas in the food-, pharmaceutical- and cosmetics- industries.

APPROVALS

DIN-DVGW type examination (up to 80°C)

Type approval ACS

Type approval WRAS (up to 85°C)

Type approval PZH

TR ZU 032/2013 - TR ZU 010/2011

Type approval ÜA (R-15.2.4-21-17231 Land Salzburg)

MATERIALS

Component	Material	DIN EN	ASME
Inlet body	Stainless steel	1.4408	CF8M
Outlet body	Stainless steel	1.4408	CF8M
Internal parts	Stainless steel	1.4408	CF8M
	Stainless steel	1.4404	316 L
Spring	Spring steel with anti-rust protection	1.1200	ASTM A228
Strainer	Stainless steel	1.4404	316 L

RINA

m	with diaphragm	High-quality, heat-resistant moulded elastomere, fabric-reinforced diaphragm. Pressure adjustment by means of non-rising spindle. Valve insert with balanced single seat valve completely made of stainless steel.
Complete val	ve insert SP/HP (order code: 481 Insert	-DNseal) available as replacement part can be exchanged without removing the valve.
Complete val	ve insert LP (order code: 481 LP Insert-	DNseal) available as replacement part can be exchanged without removing the valve.
Built-in dirt tr	ap made of stainless steel.	
Mesh size:	DN 15 to DN 32 0,60 mm DN 40 and DN 50 0,75 mm	
MEDIUM		
GF	gaseous and liquid	for water and distilled water, neutral and non-sticking liquids, compressed air and neutral gases; optionally with FPM elastomere seals for non-neutral media i.e. oils, fuels, oil-laden compressed air etc. Not suitable with steam.

TYPE OF LIFTING	S MECHANISM
0	without lifting device

	RESSURE RANGES		
SP	Standard version	Inlet pressure: up to 40 bar	Outlet pressure: from 1 to 8 bar
HP	High-pressure version	Inlet pressure: up to 40 bar	Outlet pressure: from 5 to 15 bar
LP	Low-pressure version	Inlet pressure: up to 25 bar	Outlet pressure: from 0,5 to 2 bar

AVAILABLE NOMI

Series 481:

Dimensioning by pressure loss on the outlet pressure side

Dimensioning by flow velocity

For Liquids:

With help of the chart you can determine the nominal diameter (DN) for a given flow volume V (m³/h). According to DVGW-guidelines (DIN 1988) a flow velocity of 2 m/s in domestic water supply systems should not be exceeded.

For compressed air and other gaseous media:

The usual flow velocity for compressed air is 10 - 20 m/s. For gaseous media the flow volume V should always be shown in actual cubic meters/hour. If the flow volume is given in standard cubic meters, these should be converted into actual cubic meters before using the diagram.

 $V(m^{3}/h) = \frac{V_{\text{Norm}}(Nm^{3}/h)}{p_{\text{absolut}}(bar)} = \frac{V_{\text{Norm}}}{p_{\ddot{v}+1}}$

Actual cubic meters are based on the prevailing pressure of the medium on the outlet side of the pressure reducer.
